Subject Re: Fw: EE/CA Alternatives and Logistics 

Thanks for forwarding that email, Chris. I think that DPE could be viewed as a groundwater cleanup remedy - but it is obviously a bit more than just a GW containment remedy (then again, so is EAB). I suppose one could argue that the soil vapor phase of DPE helps to ensure containment in the long term. One question for you regarding the upcoming data collection work - do the DQOs for that work cover collecting data to evaluate and design a DPE system (or any other sort of GW system)? If we let OPOG go the rough they prefer, we would need to ensure that the DQOs and resulting FSP/QAPP are adequate for supporting selection of a GW alternative under the EE/CA.

Fred
